| Name: <br> Woods |  |  | Grading Quarter:1 | Week Beginning: 8/28/23 |
| :---: | :---: | :---: | :---: | :---: |
| School Year: 23-24 |  |  | Subject: Precalculus |  |
| $\begin{aligned} & 3 \\ & \text { ㅇ } \\ & \frac{1}{2} \\ & \stackrel{2}{2} \end{aligned}$ | Notes: | Objective: Students will be able to solve exponential and logarithmic equations with and without technology. <br> Lesson Overview: <br> Notes: Start with "Level 1" problems and work up to "Level 6" problems. Take note of problem-solving strategies at each level. <br> Partner work: Rotate partners solving problems on the projector. Formatively assess what levels need the most work. |  | Academic Standards: <br> P.F-BF.B. 5 Understand the inverse relationship between exponents and logarithms and use this relationship to solve problems involving logarithms and exponents. |
| $\begin{aligned} & \underset{\sim}{\wedge} \\ & \text { D } \\ & 0 \\ & \stackrel{0}{\otimes} \end{aligned}$ | Notes: | Obje <br> and <br> tech <br> Less <br> This <br> "Pro <br> part <br> solve | ts will be able to so quations with and <br> ion of yesterday's the room" style of blems that require | Academic Standards: <br> P.F-BF.B. 5 Understand the inverse relationship between exponents and logarithms and use this relationship to solve problems involving logarithms and exponents. |
| $\sum_{0}$ $\stackrel{0}{2}$ 0 0 $\stackrel{0}{0}$ $\stackrel{1}{2}$ | Notes: | Obje <br> and <br> Less <br> Not <br> com <br> solvi <br> amo <br> (solv | s will be able to ap to real-world probl <br> any different topic t (solving for final radioactive decay ( g for time), and do ation and solving fo | Academic Standards: <br> P.F-BF.A. 1 Write a function that describes a relationship between two quantities. c. Compose functions. For example, if $\mathrm{T}(\mathrm{y})$ is the temperature in the atmosphere as a function of height, and $h(t)$ is the height of a weather balloon as a function of time, then $\mathrm{T}(\mathrm{h}(\mathrm{t}))$ is the temperature at the location of the weather balloon as a function of time. <br> A2.F-BF.A. 1 Write a function that describes a relationship between two quantities. Include problem-solving opportunities utilizing real-world context. Functions include linear, quadratic, exponential, polynomial, logarithmic, rational, sine, cosine, tangent, square root, cube root, and piecewise-defined functions. |

| $\begin{aligned} & \text { 긱 } \\ & \frac{1}{\lambda} \\ & \stackrel{0}{2} \\ & \frac{2}{<} \end{aligned}$ | Notes: | Objective: Students will be able to apply exponential and log functions to real-world problems. <br> Lesson Overview: <br> This is a continuation of yesterday's lesson. <br> Notes: Cover as many different topics as time allows: compound interest (solving for final amount and solving for time), radioactive decay (solving for amount and solving for time), and doubling situations (solving for population and solving for time). | Academic Standards: <br> P.F-BF.A. 1 Write a function that describes a relationship between two quantities. c. Compose functions. For example, if $\mathrm{T}(\mathrm{y})$ is the temperature in the atmosphere as a function of height, and $h(t)$ is the height of a weather balloon as a function of time, then $\mathrm{T}(\mathrm{h}(\mathrm{t}))$ is the temperature at the location of the weather balloon as a function of time. <br> A2.F-BF.A. 1 Write a function that describes a relationship between two quantities. Include problem-solving opportunities utilizing real-world context.
