| Name: Adam Reeck |  |  | Grading Quarter: $2$ | Week Beginning: October 23 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Sch | ol Yea |  | Subject: Geometry - Honors |  |  |
| 3 응 20 20 | Notes: | Objective: Students will prove, apply, and solve problems using triangle inequality theorems. <br> Lesson Foundations: Angle-side relationships in triangles, logic, Properties of inequalities (pg. 373), Exterior angle theorem <br> Lesson Overview: Will primarily do problems as we have already covered these principles prior to fall break. <br> Bellwork: Fill out your Math Log, In your notes, write out Perpendicular Bisector, Angle Bisector, Altitude, Median and draw a decent sized triangle next to each one, allowing several lines in between each term. Next, see if you can determine where each segment starts on the triangle. <br> Assignment: 6-4 (1-16), 6-6 (1-19 odd) |  |  | Academic <br> Standards: <br> G.CO. 10 |
| $\begin{aligned} & \stackrel{-1}{\stackrel{1}{0}} \\ & \text { N} \\ & \stackrel{0}{2} \end{aligned}$ | Notes: | Objec segm <br> Lesso <br> Geom <br> Sides <br> Lesso <br> types <br> Bellw <br> Review <br> Assign | s will review Points of iangles that have specific <br> : Perpendicular bisectors <br> s, Distance formula, Py <br> Make connections betw nts <br> math logs, check your gr <br> $w$ problems from math | cy by creating <br> ructions of, Coordinat n Theorem, Vertices, <br> s of concurrency and <br> ks, and | Academic <br> Standards: $\begin{aligned} & \text { G.CO.9, G.CO.10, } \\ & \text { G.C0. } 12 \end{aligned}$ |

|  | Notes: | Objective: Students will demonstrate understanding by creating 4 triangles with the four points of concurrency. They'll demonstrate why they know those points are what they are. <br> Lesson Foundations: Perpendicular Bisectors, Angle bisectors, Medians, Altitudes <br> Lesson Overview: Test - <br> Bellwork: Fill out your math logs. <br> Homework: None | Academic <br> Standards: $\begin{aligned} & \text { G.CO.9, G.CO.10, } \\ & \text { G.CO. } 12 \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { 굿 } \\ & \text { ㄷ } \\ & \text { N } \\ & \stackrel{\text { N }}{\gtrless} \end{aligned}$ | Notes: | Objective: Students will solve problems by applying the Centroid Theorem. They will use altitudes and their understanding of slopes to determine orthocenters of triangles. <br> Lesson Foundations: Polygons, Interior/exterior angles, Vocab <br> Lesson Overview: Angle Sum Theorem, individual angle measures <br> Bell work: How many non-overlapping triangles can you create in an octagon? What is the sum of the measures of each one of those triangles? How many non-overlapping triangles can you create in a square? What about a hexagon? Is there a pattern? If so, what? <br> Assignment: 7-1 (1-33 odd) | Academic Standards: G.MG. 1 |
| $\begin{aligned} & \frac{\pi}{2} \\ & \frac{1}{2} \\ & \stackrel{2}{2} \end{aligned}$ | Notes: | Objective: Students will understand the properties of a parallelogram by doing problems and creating problems that demonstrate the unique characteristics of Parallelograms. <br> Lesson Foundations: Vocab, review the idea of properties <br> Lesson Overview: Parallelograms and their properties <br> Bellwork: Fill out your Math Log <br> Assignment: 7-2 (1-5, 9-14, 19-27) | Academic Standards: $\text { G.CO. } 11$ |

## Think about doing something with exploration
